APPLICATIONS

Live Face Off live | [Github](#)

A full stack MERN application with a complete UI/UX interface, allowing users to connect via webcams.

- Main backend architect, utilizing **Node.js**, **MongoDB**, **Express**, **Passport**, **Socket.io**, **WebRTC**, and more to create a safe and stable structure for the web app to be deployed with.
- Implemented **Google and Facebook oauth**, as well as a **local strategy** for users to login in with.
- Managed the team, making sure everyone knew their daily schedule and tasks.
- Mirrored client to server data transferring with web sockets, allowing for real-time integration.
- Produced a **ReactJS** frontend fully equipped with **Webpack**, **Materialize** for design, client side user authentication and sanitization, and **Axios** calls to gather required information from the server.

Hearthstone Battle live | [Github](#)

A web app featuring a single and multiplayer mode built with Javascript, jQuery, HTML5, and CSS3

- An 18 card memory match app based off of one of Blizzard's top grossing games, Hearthstone.
- Built using **Object Oriented Programming** in combination with **jQuery** for the ability to dynamically create most elements.
- Both mobile and desktop responsive due to **CSS3** Flex box and **media queries**.

Hackathon - Beets & Eats live | [Github](#)

An on the go event planner that combines restaurants, breweries, and local events for an easy night out

- Utilized **Ajax** calls to Google, Yelp, and Ticketmaster to gather data based upon a specific location.
- Implemented a **Bootstrap4** design for the layout of the app, all within a **48** hour deadline.

Yourstorybooks live | [Github](#)

An online resource for users to login with their google account and post a public or private story.

- Created using a **Node.js** backend with a Mongo database through **mlab** and deployed on **AWS**.
- **Ubuntu** serves as the operating system with **Apache** working as the HTTP server.
